Rotaract Club of Xiamen University Malaysia

Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	Link
Project / Solution Name	Link - AI-Powered Onboarding for Teams
Name (Leader)	Samuel Phang Han Wen
Email & Phone (Leader)	ait2404058@xmu.edu.my / +60 11-2008 8045
University Affiliation(s)	Xiamen University Malaysia
Live Prototype URL	https://sdc-hackathon-link.replit.app/
Code Repository URL (public / access granted to judges)	https://github.com/PicklePee-PicklePee/SDC-hackathon-LINK-

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

The React/Vite web app is hosted on Replit. Requests pass through an Express API, which validates Clerk identity and workspace membership and reads/writes workspace, training, progress, quiz and message records in PostgreSQL. The app has a separate RunPod Serverless integration for GPU work. Its intended worker chunks approved workspace documents, embeds them with sentence-transformers/all-MiniLM-L6-v2, indexes vectors with HNSWlib, retrieves relevant passages, and uses Qwen2.5-0.5B-Instruct to generate cited answers; PEFT supports optional LoRA fine-tuning. The custom RunPod worker has not been built on RunPod or GPU-tested, so this describes the intended architecture, not verified live inference. No API keys are included in this document.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
React 19 / DOM; Vite 8; Tailwind 4; Lucide; Wouter	Web interface, styling, icons and routing	MIT; ISC
Node.js; Express 5; CORS; HTTP proxy	Application API and proxy	MIT
@clerk/react; @clerk/express; @clerk/shared	Identity and authentication SDKs	MIT SDK; hosted-service terms
pg 8.23; PostgreSQL	Database client and relational database	MIT client; PostgreSQL License
Python: FastAPI; Uvicorn; Pydantic	Worker API and data validation; custom worker not GPU-tested	MIT; BSD-3-Clause
Python AI libs: PyTorch, Transformers, Sentence Transformers, HNSWlib, PEFT, Accelerate, NumPy	Optional GPU indexing / retrieval / LoRA worker; not GPU-tested	BSD-3-Clause / Apache-2.0 / MIT (varies)

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
Clerk	Authentication and identity for app users	free
RunPod Serverless API	Planned worker job submission/status for indexing, retrieval and cited chat; custom worker not deployed or GPU-tested	Sponsor resource; usage-based

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Development environment and live web-app hosting	Live demo
PostgreSQL	App database via DATABASE_URL; stores workspace and learning records	
Clerk	Hosted identity and sign-in service	Free account
RunPod Serverless	Selected sponsor GPU-compute platform for the planned worker	Endpoint setup requires team verification

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Qwen2.5-0.5B-Instruct	Qwen / Hugging Face	Pre-trained; default generation model; not GPU-tested	Apache-2.0
all-MiniLM-L6-v2	Sentence Transformers / Hugging Face	Pre-trained; default embedding model; not GPU-tested	Apache-2.0

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
30 sample SOPs	Team sample library; no external training dataset	Synthetic / team sample	Team-created demo material	No

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☐ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
Replit Agent	Code, UI, writing and debugging assistance	Major

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

The team disclosed Replit Agent as a development tool and reviewed AI-assisted changes. The project was tested with automated API and Serverless lifecycle tests; sample content and app behavior are reviewed by the team. User-facing AI answers are designed to cite source passages, but citations do not guarantee accuracy. Sample SOPs are examples, not company policy; human review is required before relying on answers.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☐ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
Replit	Platform / hosting and AI-assisted development	Used to build and host the web prototype
RunPod	GPU-compute platform / Serverless API	Selected for planned worker; not built or GPU-tested

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

Replit supported development and currently hosts the web prototype, but the app could be moved to another web host. RunPod is the selected provider for the planned GPU worker. Overall, the sponsor resources are perfect for us to build our prototype for this hackathon. It really helps us a lot and cut lots of cost for us to build make our ideas come true.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The demo uses sample training content only, per team confirmation. The application still processes user account identifiers, names and emails through Clerk and PostgreSQL. PostgreSQL also stores workspace memberships, uploaded text, chat messages and citations, quiz scores, learning progress and job metadata. Server-side workspace and role checks restrict access. If the planned worker is enabled, approved document content will be sent to RunPod for indexing/inference. No fixed data-retention schedule is documented; review deletion and persistent-volume erasure procedures before using real company documents.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

Generated answers may be wrong; citations identify retrieved passages but do not prove accuracy. Retrieval quality depends on source text and the configured small model. PDF and DOCX upload are not implemented (supported formats are TXT, Markdown, CSV and JSON). Sample SOPs are illustrative, not verified company policy. Mitigations include workspace/revision filters, source citations, explicit unavailable states when the worker is disconnected, confirmation before billable jobs, limited worker concurrency, sample labels and human review. No environmental savings are claimed.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☐ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☐ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☐ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☐ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☐ Any use of official SDC sponsor resources has been declared in Section 5.
- ☐ The prototype described here is accessible to judges through the links provided in Section 1.
- ☐ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
